ABSTRACT

This bibliography is intended to be comprehensive (through December 1, 1973) in its coverage of articles, books, and conference papers on the personalized system of instruction. It also includes some papers dealing with related topics such as the audiotutorial method, individually prescribed instruction and, occasionally, programed instruction. Most of the papers are concerned with teaching at the college or postsecondary level. (Author/MJM)

PREFACE

This bibliography is intended to be comprehensive in its coverage of articles, books, and conference papers on the Personalized System of Instruction through December 1, 1973. It also includes some papers dealing with related topics such as the Audio-tutorial method, Individually Prescribed Instruction, and occasionally programmed instruction; we have not attempted to cover the field of computer-assisted instruction. Most of the papers are concerned with teaching at the college or postsecondary level.

Because of the difficulties of publishing papers on teaching in journals mainly disciplinary in scope, many papers useful to readers of this bibliography are unpublished. Unfortunately, this implies that neither are they refereed, nor can one be assured of access to them. To get a copy of an unpublished paper, we suggest that you write first to the author (if his address can be found) or to the organizer of the conference at which the paper was read (addresses on pp. 1-4). Customs differ in this matter: psychology conference givers often can supply copies of their papers, physicists usually cannot.

To help remedy this situation, the Center for Personalized Instruction is attempting to maintain a file of unpublished papers and to supply copies at cost to requesters. We do not have all of the papers in the bibliography, however. Those which we do have are designated by an asterisk (*). They are available from the Center for $1.00 each.

I wish to thank the staff of the Center for Personalized Instruction, J. G. Sherman, F. S. Keller and B. A. Green for their thoughtful and incisive comments during the many stages of development of this project.

I would also like to thank Stephen Bono, Kent Johnson, John Hess and Jane Gross for their invaluable assistance.

Every attempt has been made to make this list as comprehensive as possible. If there are authors who have been ommitted or authors who have articles published in the future, we would appreciate receiving a copy of your manuscript for inclusion in future supplements.

R. S. Ruskin
